DRONE CONTROLLER TRIPOD MOUNT

The RC Plus tripod mount has a 1/4 20 hole to receive standard tripod mounting brackets. Securely mount your RC Plus controller in the Hoodman mount by releasing tension on the thumbwheel. Then slip the large end of the mount around the front of the controller. Next, slide the hair pin end of the mount over the chrome handle. Squeeze the hair pin end and the front large end of the mount together and tighten thumbwheel.
